OUTDOOR FLOORING

Our Outdoor Flooring provides a solid surface when your event is in a parking lot, tent, field or stadium- at an inexpensive price. Our various outdoor floors can hold heavy vehicles and equipment, as well as provide temporary pathways on rough and uneven outdoor terrain. Our outdoor flooring is shipped in pre-assembled sheets for fast installation and dismantling.

This flooring system's design and construction allows it to be used outdoors without damaging the grass underneath, and is available with and without aeration holes to allow water to drain through the surface. All plastic flooring materials expand and contract with fluctuating temperature conditions in plastic modular floors, this sometimes leads to floors warping, buckling, disconnecting or otherwise become uneven. You won't have these problems with outdoor floor: Our engineered expansion joint module prevents these issues.

Level One Outdoor Flooring

Our portable Level 1 Outdoor Flooring is ideal as a stand-alone floor or as a sub-floor for carpet or turf. You can also use it as a sturdy, attractive base for chairs, tables, and dance floors over grass, mud, dirt, asphalt, or gravel. Supports Even Heavy Weight: Level 1 Outdoor Flooring is engineered to minimize lateral flex and distribute weight evenly across its support beams and ribbing. This prevents the floor from digging into the turf, even under heavy weight.

Preserves Grass and Turf: Hidden under the top of each floor's module's surface is a specially designed canopy, which is constructed to both retain moisture and allow for the right amount of light, water, and air to reach the grass underneath. So you can leave Level 1 Outdoor Flooring in place for days without killing the grass. It also prevents damage from strong sunlight and heat.

Some customers even find their grass is actually greener after a few days use as a result of the greenhouse-like conditions created by the
