

## Interlocking Rubber Flooring

Re-Tired Rubber Flooring is an ideal product for the trade show industry. These heavy-duty 2' X 2' interlocking tile or 4' wide rolls are made from recycled truck tires and are available in a variety of speckled colors as well as classic black.

The small zipper-like interlocking teeth are cut using state-of-the-art technology which produces an extremely durable connection that will not break or tear apart even with repeated installation and dismantle. The teeth are designed to not pull apart during use and the 4' wide roll out mats will stay flat after they are laid down.
